Engineering a bright future together
Donor Appreciation Breakfast
February 1, 2017
Born in Tempe, Arizona, Ira Fulton grew up a block from the engineering school at Arizona State University that now bears his name.

He began defining his own work ethic early in life, starting a paper route at age 11. It grew into a profitable venture that put him through Arizona State College — now Arizona State University — where he met his wife, Mary Lou.

In the 1950s, he went to work for NCR (National Cash Register), where he rose to the heights of National Salesman of the Year. He then launched his first entrepreneurial venture, a computer leasing company that automated several retailing corporations. In 1976, he bought Eagleson’s Big & Tall retail stores and built it from a two-store operation into a 33-store chain.

A few years later, he helped transform Fulton Homes, a struggling real-estate company he had started with some of his nephews, into one of Arizona’s biggest home builders. Under his guidance, Fulton Homes has grown from a small construction company to one of the largest private homebuilders in the country.

More recently, Mr. Fulton has turned his investor’s eye to education. In his philanthropy, he seeks to provide students with opportunities to enrich their education, make them more competitive job applicants and help them build futures for their families.

In 2003, he established an endowment of $50 million in support of ASU’s College of Engineering and Applied Sciences, and the college was re-named the Ira A. Fulton Schools of Engineering in his honor.

Mr. Fulton is a member of the National Academy of Construction. He received an honorary doctorate of engineering from Brigham Young University in 2007.
Kaleigh Johnson, an ASU chemical engineering senior from Gilbert, Arizona, is a Barrett, the Honors College student and also a first-generation college student in her family. She is enrolled in the School for Engineering of Matter, Transport and Energy, one of the Ira A. Fulton Schools of Engineering.

Kaleigh Johnson says chemical engineering was an easy choice as it combined her favorite subjects of chemistry, math and physics in a versatile field that could take her anywhere in her quest to make the world a more sustainable place. Meeting the challenge of worldwide sustainability requires academic and entrepreneurial skills. To take on this challenge, Johnson is participating in two Fulton Schools programs: the Grand Challenge Scholars Program and Engineering Projects in Community Service.

Through GCSP she is gaining the skills needed to tackle 21st century global issues in sustainability. She is developing leadership, public speaking and communication skills through a teaching assistantship and GCSP Summer Institute counselor positions in the program.

Her participation in four semesters of EPICS also led to lessons in teamwork, leadership and the engineering design process. In the first semester, she worked to build a pedestrian bridge at the Rio Salado Park. Then she started her own project to design and build a renewable air compressor.

Johnson is currently furthering her chemical engineering knowledge and contributing to the progress of sustainable industrial engineering practices through research in synthetic biology — using microorganisms to produce compounds and materials for industry — as part of the Fulton Undergraduate Research Initiative.

Her extensive research efforts in her first three years at Arizona State University have earned her one of four Barry M. Goldwater Scholarships awarded to students in Arizona. Her studies in sustainability have taken her outside of ASU and the country to achieve one of her lifelong dreams through the US-UK Fulbright Commission’s Summer Institutes: traveling to Europe where she spent a month studying climate change at the University of Exeter. Johnson has also traveled to China and Washington, D.C., through GCSP opportunities.

“I cannot believe the time has come to finally call myself a Senior. The next two semesters will consist of only upper division classes, so I know they will keep me busy, but prepare me well for graduation. My goal is to be involved in the residential industry when I graduate. I love that I will be creating the places that families come home to and make memories that will last their lifetimes.”

“I tell this esteemed society my life aspirations because I want you to know how thankful I am for your scholarship and I hope you feel confident that your investment in my education will pay dividends to advance our discipline. Every scholarship I earn helps me to save up for my dream of becoming a doctor of structural civil engineering. Continuing my education with the aid of scholarships means having the time and opportunity to further my involvement as a leader of the American Society of Civil Engineers chapter, and an active member of the Kappa Kappa Psi National Honorary Band Service Fraternity. Through the connections I make and the experiences I gain leading an organization of my civil engineering peers, I will develop the confidence and skills needed to lead multi-million dollar projects and innovative teams of people.”

“I have set new goals and am constantly reevaluating myself as a person and a leader. The Panhuise Engineering Scholarship and the FSW - Women in STEM Scholarship not only lets me focus my energy in helping my community but it also gives me the opportunity to be a part of the community that is caring towards each other and works towards a high, more impactful goal. I appreciate this scholarship very much. It is without a doubt a blessing to be a Sun Devil.”

“I wanted to thank you and tell you how honored I am to be chosen as a recipient of these scholarships! This is going to help in so many different ways to finish my schooling. Not only will it help me pay for school, but it will take off some of the pressure to work during a busy year. Ultimately allowing me to focus more on achieving my academic goals, like remaining on the Dean’s List, my Honor’s thesis, and graduating in the top percentage of my class.”

Natasha Hebel, Construction Management
Ben C. Griggs Memorial Scholarship and the Samuel F. Kitchell Undergraduate Leadership Scholarship

“Thank you for awarding me the Richard R. Simari Memorial Scholarship. I have been working very hard in school, and I am grateful for the recognition of this hard work. This scholarship will go a long way to make my education more affordable and reduce my student loan debts. With the help from this scholarship I can spend more time focusing on my studies and giving back to the community.”

Austin Goodrich, Mechanical Engineering
Richard R. Simari Memorial Scholarship

“This scholarship has relieved quite a burden off of my shoulders. I work a lot during the semester trying to make sure I meet deadlines and payments as needed. I’ve tried my best to take as little of a student loan as possible but it is tough to make ends meet sometimes and that large loan amount is tempting. This scholarship will give me a little bit more security in knowing that if I take a day off from work to study for an exam, I will still be able to buy food and gas. Thank you so very much for your incredible generosity. Thank you for allowing me to be a better student.”

“Engineering solutions to better the lives of people and making a positive impact on our world and the environment is all I have ever been serious about pursuing. I am an incoming freshman in the Civil Engineering program for this reason. I want to be a part of the rapid changes that our infrastructure will require in the coming years and decades to address issues regarding sustainability, environmental health, and human needs. This is why I am here, in the Fulton Schools of Engineering at Arizona State University, because I want to make a difference, and contribute my small part to finding a viable balance between the demands of society and those of our natural environment. I wanted to extend to you my most sincere gratitude, because the Martin H. Rosness Memorial Scholarship is going to put me one step closer to being able to achieve this goal.”

1,221 degrees awarded in 2007–2008

3,615 degrees awarded in 2015–2016

87% freshman retention rate

108% increase in graduation rate over last 6 years

“Our supportive Fulton Schools community is phenomenal, both on campus and among alumni and friends. We have the potential to magnify the entrepreneurial mindset thriving among our students so that they can tackle the problems confronting our society.”

—Kyle Squires, Dean
Ira A. Fulton Schools of Engineering

invest.engineering.asu.edu
Thank you for your life-changing support.

“This coming year I was chosen to receive the Theodore Allen Memorial Scholarship and I can’t thank you enough for the scholarship. Though I do love attending Arizona State University I must admit it is expensive and if it wasn’t for scholarships I would not be able to afford this education. This will allow me to avoid taking so many hours at work and allow me to concentrate more on my studies as I enter my senior year. I am studying mechanical engineering and have heard from previous graduates how sometimes the last year can be the most stressful as you prepare to enter the real world but fortunately with your assistance worrying about finances won’t be my biggest concern.”

Michael DeKonty, Mechanical Engineering
Theodore Allen Memorial Scholarship
